

JUMBO Stillads Helps Pros Reach the Top

JUMBO Stillads A/S is one of Europe's leading manufacturers of aluminum scaffolds and ladders. The company's range includes everything for helping professionals around the world reach the top, from various scaffold and ladder types to person and material lifts - and much more.

This comprehensive product offering has been developed from a single idea: The development of a modular scaffolding system where the diagonal braces of one scaffold can be used as the railing for the next bigger scaffold, an idea which proved to be an instant success. This system saved weight and transportation costs and proved to be very flexible, making the construction of made-to-measure scaffolding easier. The fact that JUMBO uses aluminum for the scaffolds saves additional weight. The dimensions for the scaffolding system have been kept unchanged for more than 25 years - meaning customers can add components to their existing system at any time without any problems.

The aluminum scaffolds from JUMBO are top quality and consist of fully welded frames and wall thickness ranging from 2 to 4 mm, lending them excellent robustness. The uncompromising attitude towards quality is stressed by the fact that all products as well as the factory meet the stringent requirements of the European norms in force (i.e. the aluminum towers are certified according to EN 1004, Class 3). JUMBO Stillads A/S also offers a wide range of aluminum ladders,

from step stools to large extension ladders - all produced according to the European norm EN131.

Over the years, JUMBO Stillads A/S has been through a major expansion, most recently with an expansion of 3,000 m² in 2006. Today, factory, warehouse and administration are together under one roof in Kolding, Denmark where the total built-up area is 12,000 m². Although the greatest share of exports still goes to Scandinavia, JUMBO Stillads A/S sees a significant growth in the European market, now exporting to 20 countries with a promising growth rate. ■

Enhancing a Wide Variety of Environments with Martin Dynamic Visual Solutions

Martin Professional is a world leader in the creation of dynamic visual solutions used to enhance a wide variety of environments from entertainment applications to commercial and architectural settings. Martin dynamic visuals are the preferred solution for tours, special events, theaters, nightclubs, and television studios around the globe and are increasingly being employed in a wide range of indoor and outdoor architectural and commercial settings such as cruise ships, theme parks, ski areas, arenas and stadiums, hotels and resorts, retail, and more. Founded in 1987 and headquartered in Aarhus, Denmark, Martin operates the industry's most complete and capable distributor network with local partners in nearly 100 countries. Some of the company's products include:

LC Plus™ Series: A modular system of semi-transparent LED video panels with new generation technology that closely integrates light, video, and set design for all new possibilities in indoor and outdoor staging. Designed for the demanding rental and staging market, yet equally suitable for fixed installations such as retail environments and outdoor architecture, the LC Plus is an easy-to-use, all-in-one video solution.

EC-20™: A new generation LED screen that is brighter, lighter and faster than other screens. It combines the image quality

and precision of conventional high resolution screens with the creativity and low weight of mesh type screens. Featuring outstanding image quality, the EC-20 is designed for rapid setup and teardown in combination with maximum flexibility and easy serviceability.

Tripix™: The Tripix 1200 and Tripix 300 are the first fixtures in a new Martin line of IP66 rated outdoor LED luminaires. These two attractively designed striplights are fast to install and are the first architectural fixtures from Martin to use tricolor LEDs for superior color mixing directly at the lens.

Exterior 400 Series™: This series brings the ultimate in design flexibility to outdoor lighting. Long or short throw, mixed or single color, warm or cold white, the Exterior 400 Series does it all. ■
